

TECHFLOOR SYSTEM

-MORE TECH , MORE OUTPUT-

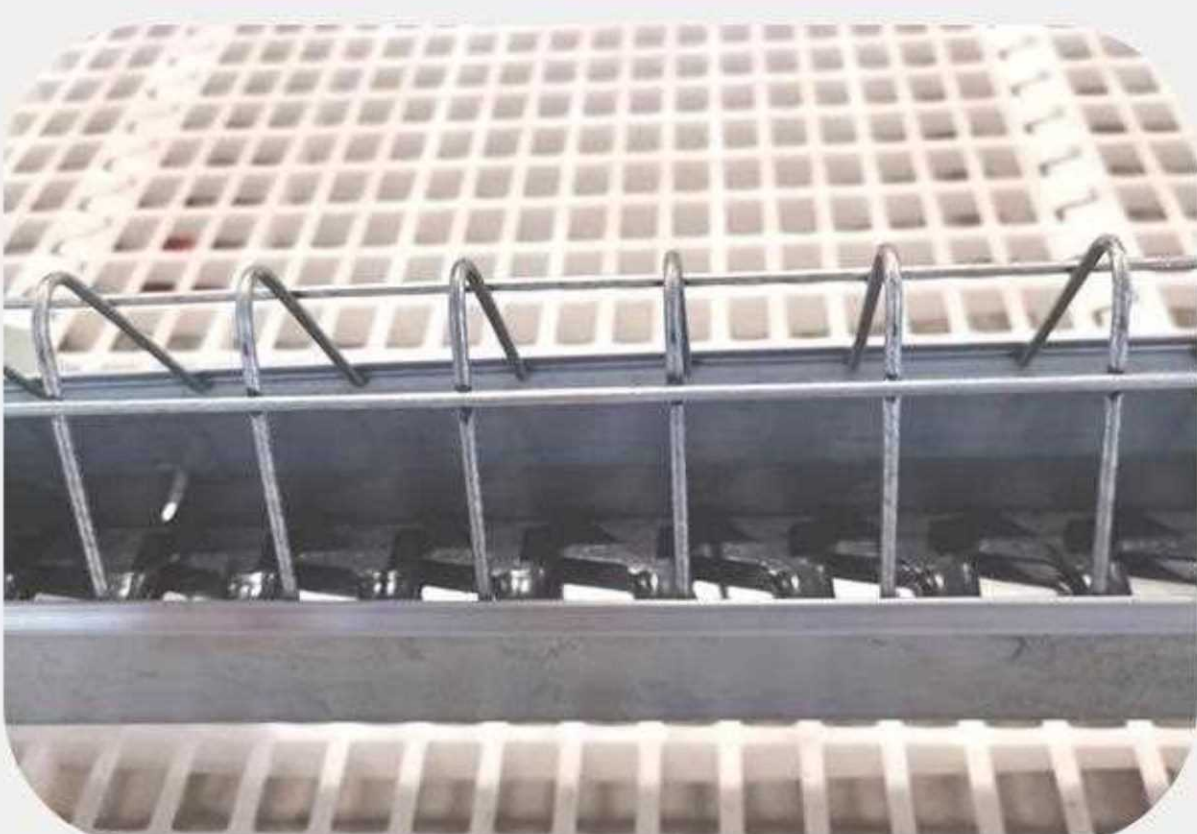

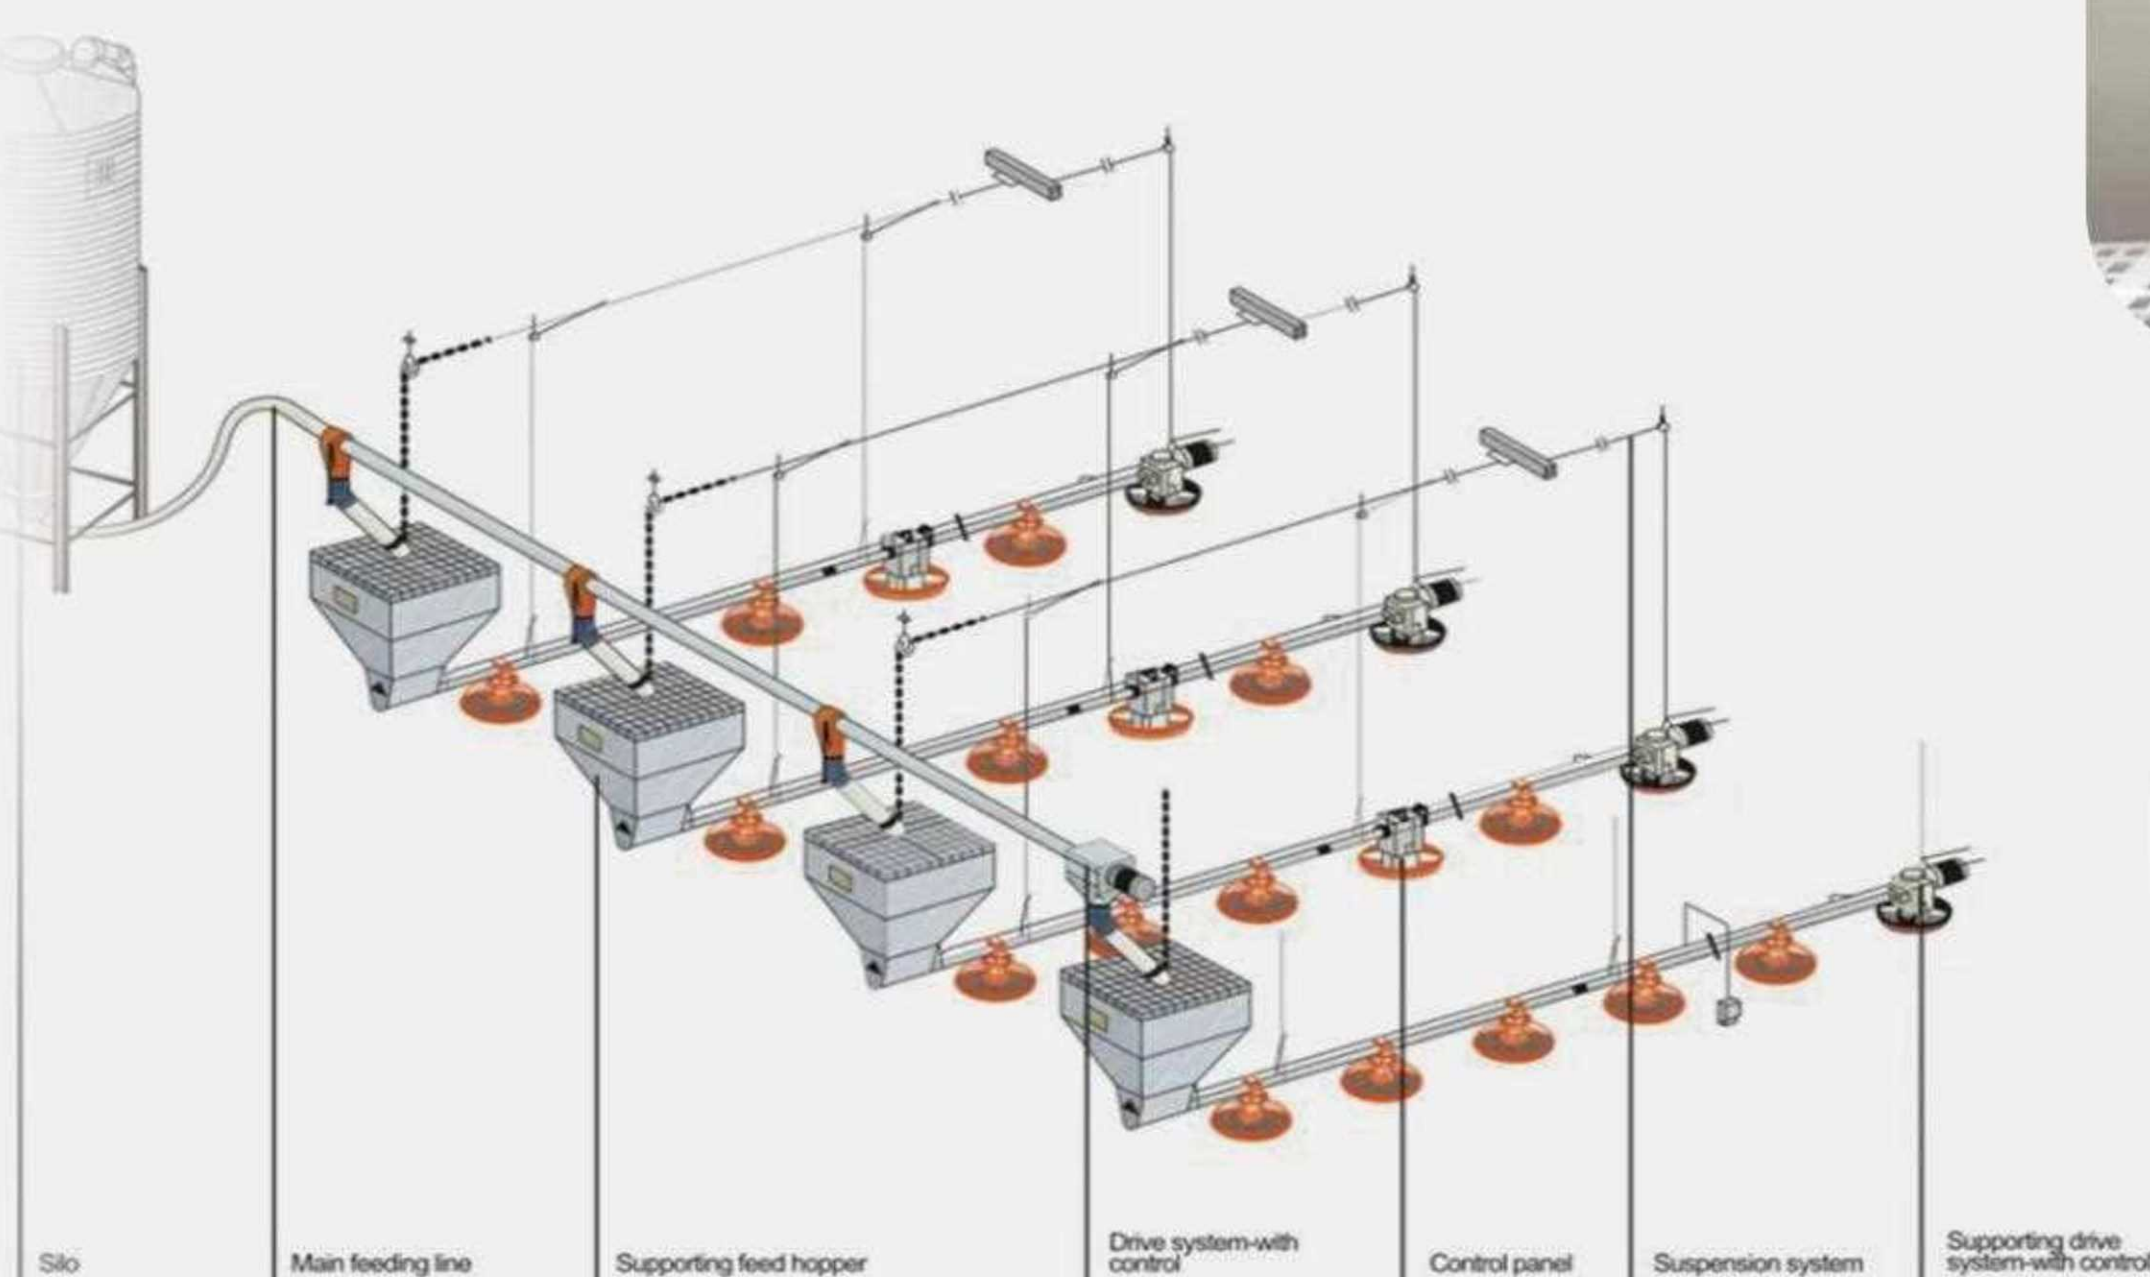

FEEDING LINE (Broiler & Breeder)

- Main feed line: $\Phi 90$ outer pipe and $\Phi 75$ feed auger (Technical System) can deliver 3 tons feed per hour. It equipped with Dol brand feed dropping sensor, which can stop feeding automatically
- Vice feed hopper: 600mm*600mm vice feed hopper acts as an intermediary to transfer the feed in the silo into each pan feeder
- Pan feed line: The hot galvanized pipe contains the auger, which can transfer the feed from the vice feed hopper to the end of the house

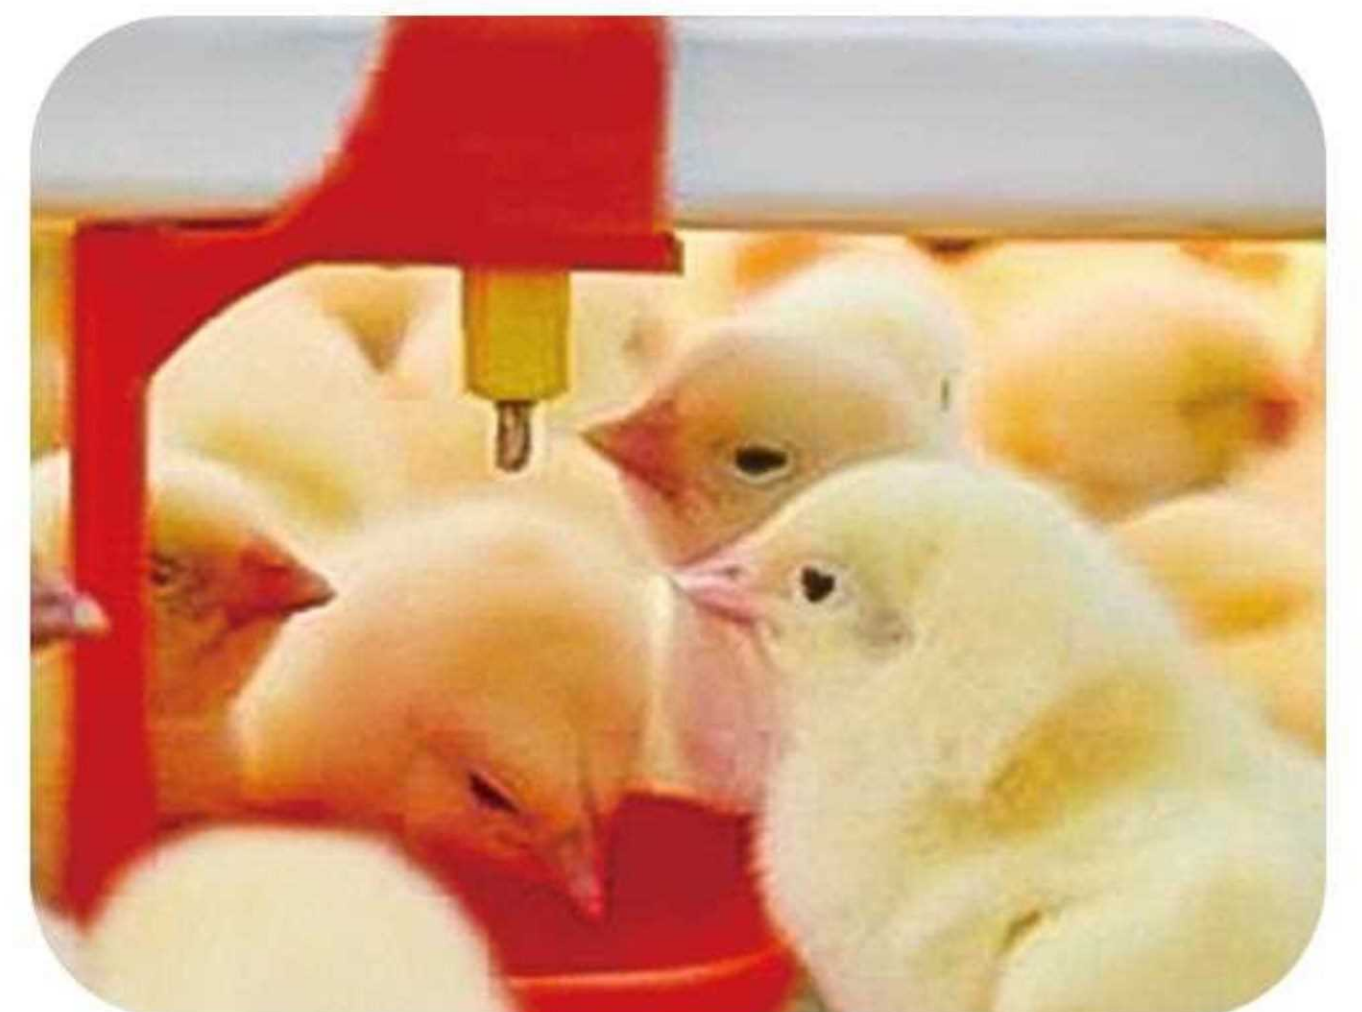

- We can also provide with the Female chicken feeding line and Male chicken feeding line for the **Breeder Flooring System**

DRINKING LINE (Broiler & Breeder)

- Pressure Regulator : Simplified design, and easy to change from water drinking to flushing
- The position of the drinking spout is scientific, with 360° water output, making it easy for chickens to drink
- Automatic nipple drinker for water distribution. Adaptable to different types of poultry farms such as broilers, laying hens, and breeding stock.
- It is possible to choose between low or high water flow drip drinkers, to meet the various needs of the poultry farm

VENTILATION SYSTEM.

- Ventilation Fans : To control the speed of the wind and provides the comfortable somatosensory temperature , and remove harmful gases in the house
- Roller curtain: shade the chicken house from rain, wind and cold. The lifting roller curtain machine rolls fast, takes a short time and saves manpower

- Cooling pad can be used in conjunction with the wind plates to create a circulation inside the coop
- Heater: Heater is powered by diesel, natural gas, or kerosene to provide a warm environment for newborn chicks

- Air inlet adopt ABS material, moisture-resistant and corrosion-resistant, fadeless
- The controller is specially customized for the TechFloor broiler system. It can automatically control the opening and closing of fans, cooling pads and air inlets
